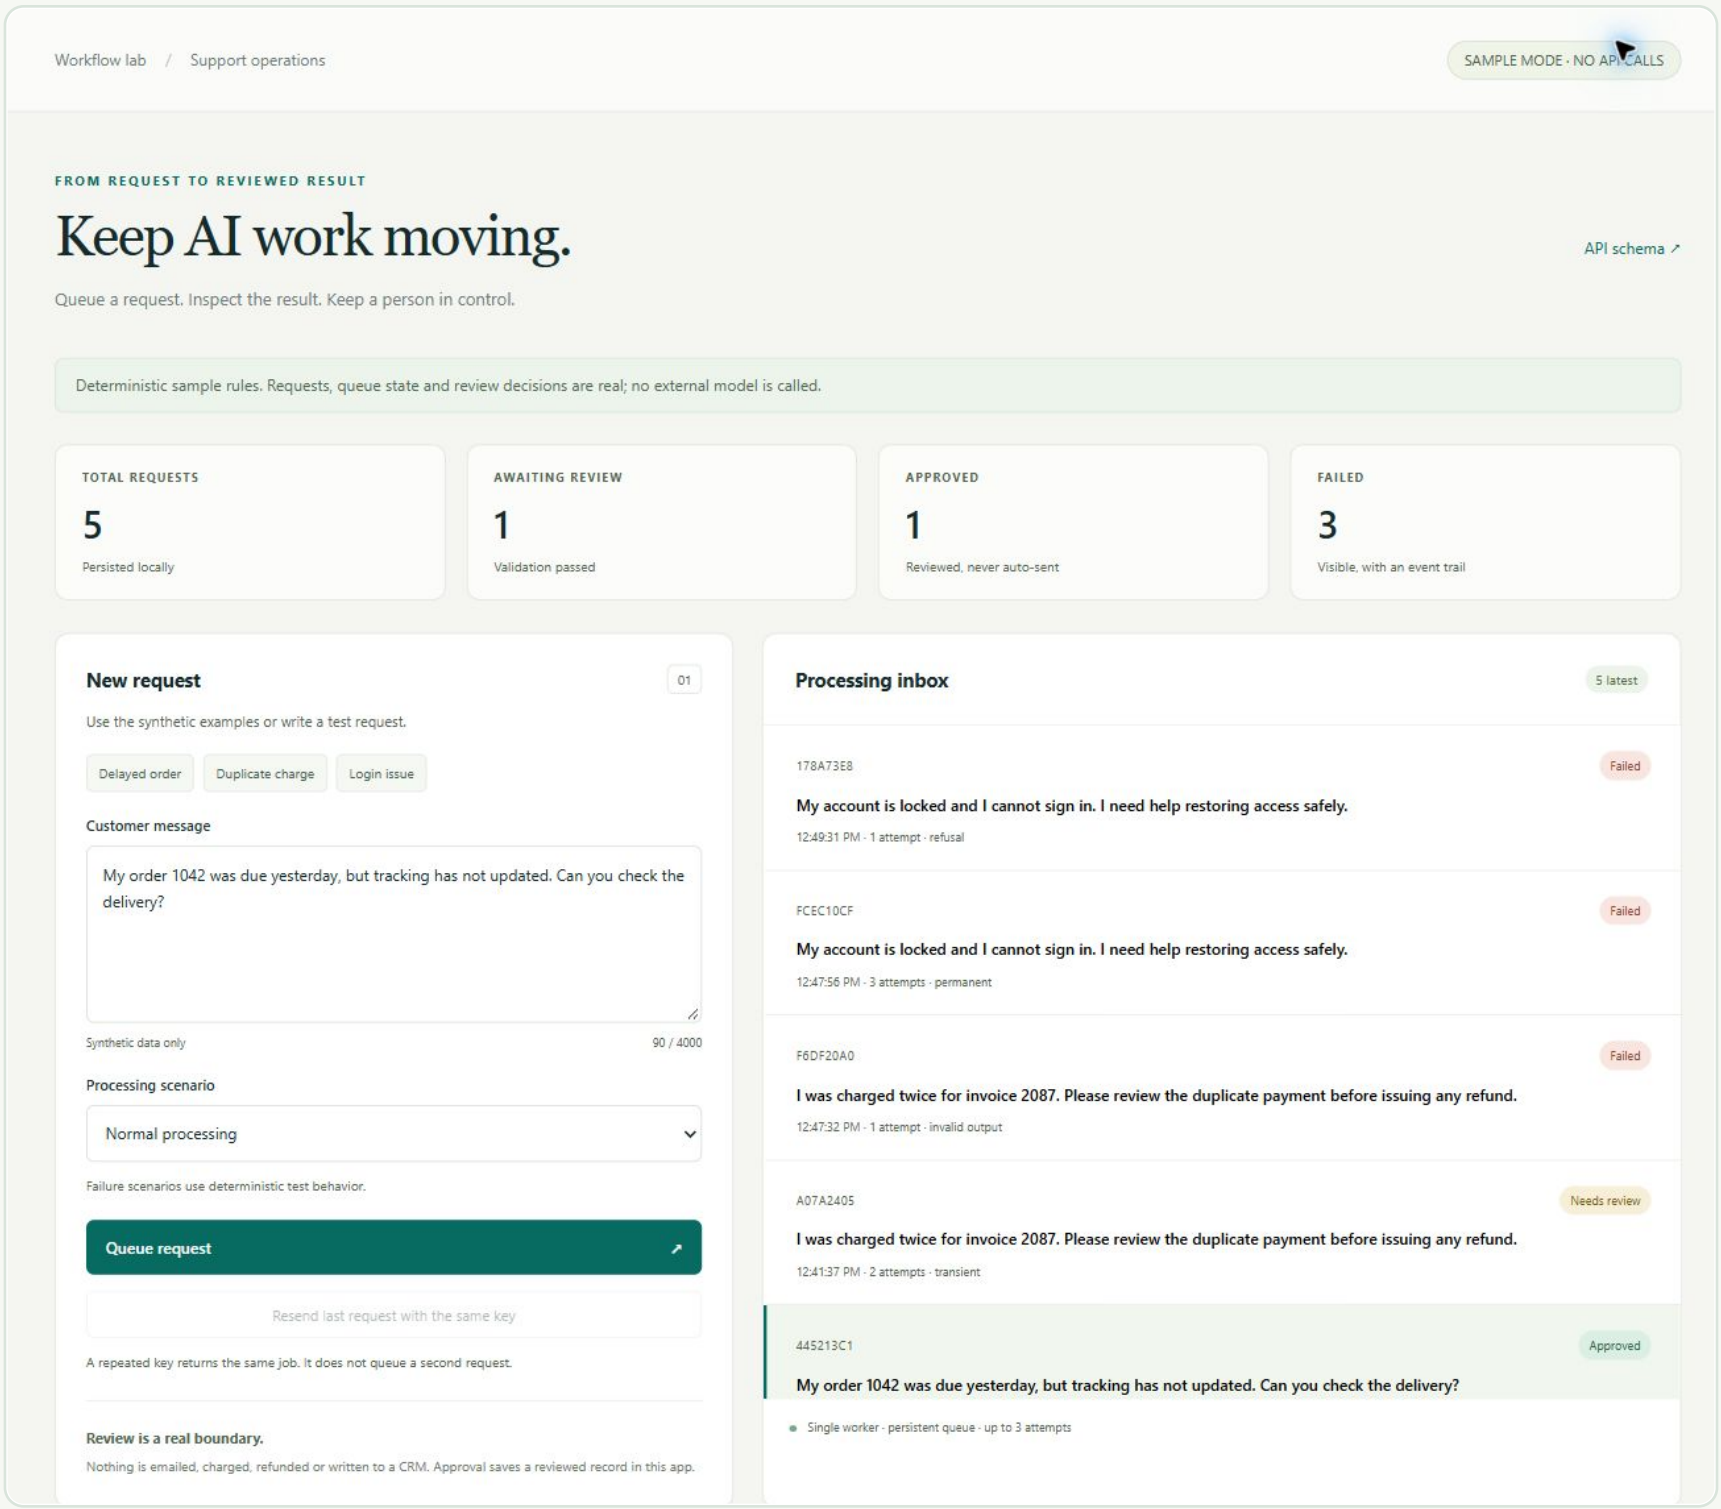
The workflow around the model.

Persisted requests, bounded retries and human review.



Actual application screenshot. Sample processing makes no external model calls.

WHAT THIS DEMONSTRATES

Queue and deduplicate

Persist requests before processing. Repeated keys return the existing job.

Recover visibly

Injected sample faults demonstrate retries and visible terminal failures.

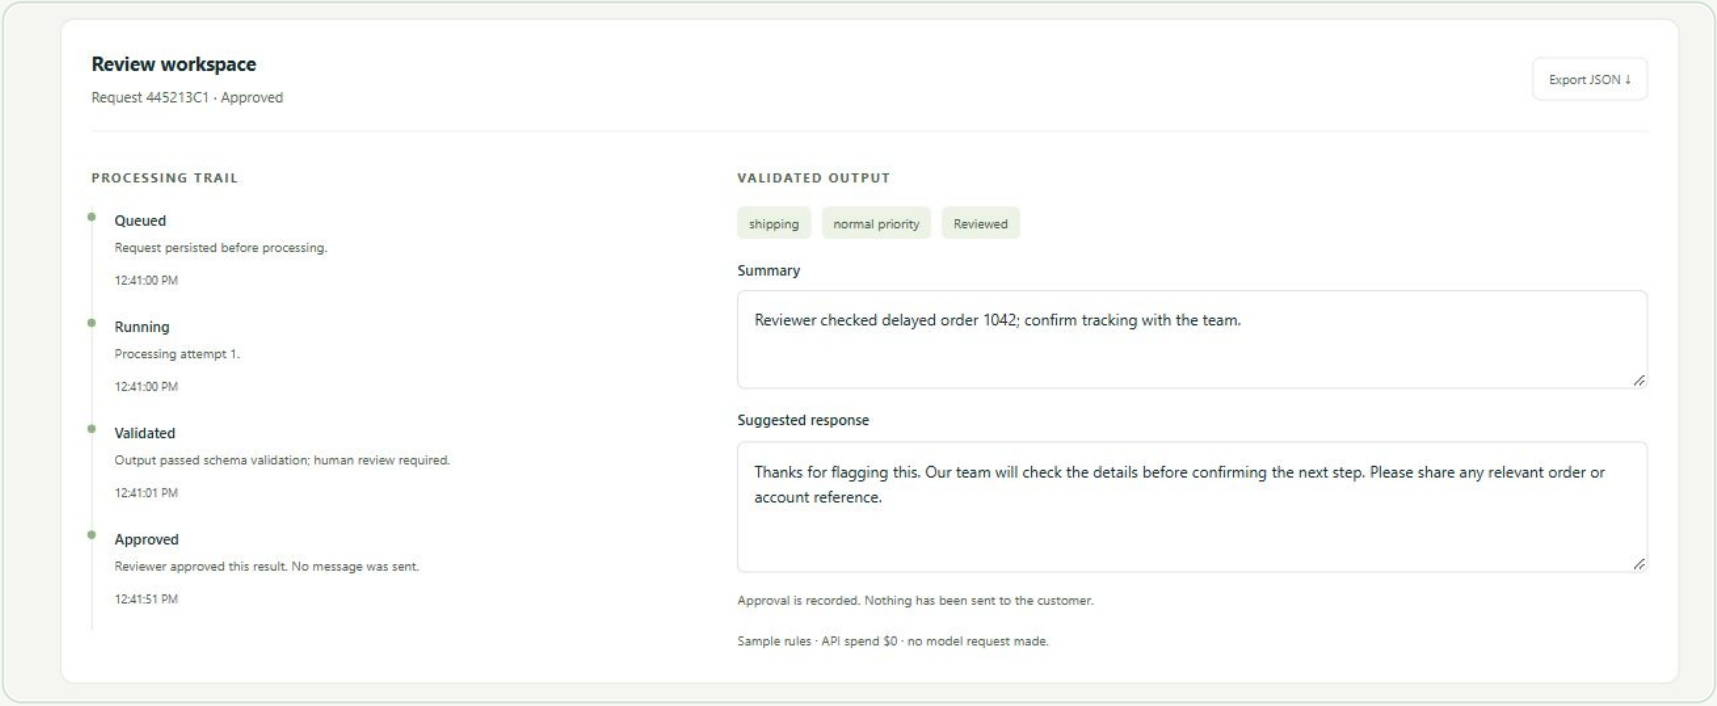
Review before action

Validated results require review. No customer message or payment is sent.

SIGNALDESK
ENGINEERING DEMONSTRATION

Results stay reviewable.

An inspectable event trail and a saved reviewer correction.



The approved record retains a review trail. Export includes original and reviewed output.

LOCAL VERIFICATION RECORD

31 automated tests	Reported passing on Windows with Python 3.13.
Browser workflows	Desktop and 390 x 844 viewport; review, retries and JSON export.
Docker	Build, HTTP scenarios and container restart persistence reported.
OpenAI adapter	Structured output and failure contracts tested with mocked responses.

Verification summary is based on the supplied project test record dated 23 October 2026. Test duration is not an application-performance benchmark.

SCOPE OF PROOF

This is a local, single-user engineering reference using synthetic requests. Live model accuracy, API cost and latency, production load and AWS deployment are not established by this demonstration.
